EB08618 - Goat Anti-ABCA8 Antibody

Size: 100µg specific antibody in 200µl

Target Protein

Principal Names: ABCA8, ATP-binding cassette, sub-family A (ABC1), member 8,

KIAA0822, MGC163152, ATP-binding cassette, sub-family A member 8

Official Symbol: ABCA8

Accession Number(s): NP_009099.1

Human GenelD(s): 10351

Important Comments: This antibody is expected to cross-react with the highly similar Human ABCA9, since the immunizing peptide differs from ABCA9 with only one residue (F8).

Immunogen

Peptide with sequence C-KEQELGDFEEDFD, from the C Terminus of the protein sequence according to NP_009099.1.

Please note the peptide is available for sale.

Purification and Storage

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

Applications Tested

Peptide ELISA: antibody detection limit dilution 1:4000.

Western blot: Preliminary experiments gave an approx. 50-55kDa band in Human Brain (Cerebellum, Cerebral Cortex, Frontal Cortex), Heart, Skeletal Muscle and Testis lysates after 0.3µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 179kDa according to NP_009099.1. The 50-55kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?

Species Reactivity

Tested:

Expected from sequence similarity: Human
