EB08787 - Goat Anti-AVPR2 Antibody

Size: 100µg specific antibody in 200µl

Target Protein

Principal Names: AVPR2, arginine vasopressin receptor 2 (nephrogenic diabetes insipidus), ADHR, DI1, DIR, DIR3, MGC126533, MGC138386, NDI, V2R, arginine vasopressin receptor 2 Official Symbol: AVPR2 Accession Number(s): NP_000045.1 Human GenelD(s): <u>554</u>

Immunogen

Peptide with sequence CARGRTPPSLGPQDE, from the C Terminus of the protein sequence according to NP_000045.1.

Please note the peptide is available for sale.

Purification and Storage

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

Applications Tested

Peptide ELISA: antibody detection limit dilution 1:64000.

Western blot: Preliminary experiments gave an approx 250kDa band in Human Brain (Cerebellum) lysates after 0.1µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 40.3kDa according to NP_000045.1. The 250kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?

Species Reactivity

Tested: Expected from sequence similarity: Human
