EB08366 - Goat Anti-TRPM8 Antibody

Size: 100µg specific antibody in 200µl

Target Protein

Principal Names: transient receptor potential cation channel, subfamily M, member 8, LTRPC6, MGC2849, TRPP8, short form of the TRPM8 cationic channel, transient receptor potential subfamily M member 8

Official Symbol: TRPM8

Accession Number(s): NP_076985.4

Human GeneID(s): [79054](#)

Non-Human GeneID(s): 171382 (mouse), 171384 (rat)

Immunogen

Peptide with sequence C-TSEQDKDNWNGQLK, from the internal region of the protein sequence according to NP_076985.4.

Please note the [peptide](#) is available for sale.

Purification and Storage

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

Applications Tested

Peptide ELISA: antibody detection limit dilution 1:8000.

Western blot: Preliminary experiments gave an approx 28kDa band in lysates of cell line NIH3T3 after 1µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 128kDa according to NP_076985.4. The 28kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?

Species Reactivity

Tested:

Expected from sequence similarity: Human, Mouse, Rat
